

## Recycling – Design an information leaflet

What has been recycled forever on our planet, and recycles itself (without any help from us)? WATER! Welsh Water recycles water. We take water from the river (clean it, use it, clean it again) and put it back into the river or sea. We can ALL help the planet by recycling other materials.

Discuss with your partner. What do the following words mean? Make some notes below.

### REDUCE

How can you reduce the water you use?

### REUSE

How can you reuse water you have used?

### RECYCLE

Can we recycle water?

Think about the sorting activities we did; can you add to the items below?

#### Household Waste

things that cannot be recycled

Dog poo

#### Garden Waste

Hedge clippings

#### Food Waste

Egg shells

#### Recyclable Waste

Cans of coke

#### Cardboard

Cornflakes box

Match the items to the length of time these items need to decompose.

<b>Forever</b>	<b>25 – 40 years</b>	<b>80 - 100 years</b>	<b>6 months</b>	<b>1 Million years</b>	<b>1-5 years</b>
<b>Glass bottles</b> 	<b>Leather</b> 	<b>Cotton</b> 	<b>Plastic bottles</b> 	<b>Wool</b> 	<b>Cans</b> 

Use the above information to create a leaflet on Recycling.

Use an organised, clear layout. Larger fonts for titles and subheadings.

Make it eye-catching. Add photos, pictures, rhetorical questions, slogans. Think about the colours you use.

The information you give must be clear and suitable for your audience. Use persuasive language and quotes.

Check your spelling is correct.

Remember punctuation.  
A . , ? ! : ; ... ()
