## SUBSIDISED MAIZE UNDERSOWING

Working together with Field Options and the Maize Growers Association we are subsidising maize undersowing and offering free maize charter visits in our drinking water catchments across Pembrokeshire.

### ELIGIBLE AREAS

Maize undersowing prevents runoff into watercourses by reducing soil erosion – safeguarding water quality before it reaches our treatment works.

### Benefits of undersowing

- Enhances soil structure by activating root mass
- Improves soil fertility
- Builds organic matter and helps retain soil nutrients
