

## Calculate wasted water

Turn a tap on just enough to make it drip and catch the drops in a measuring cylinder for one minute. Fill in the table to work out how much water is being wasted by just one dripping tap.

Families who shower use 45,000 litres of water a year less than families who take baths.

	Millilitres of water		Litres of water
1 minute	<input type="text"/>	<input type="text"/>	<input type="text"/>
1 hour	X	60	<input type="text"/>
1 day	X	24	<input type="text"/>
1 week	X	7	<input type="text"/>
1 year	X	52	<input type="text"/>

If 4 litres of water costs approximately 1 penny, work out how much your dripping tap has cost?.....

How many baths of water have been wasted? (REMEMBER! One bath = 80 litres).....
