

Catchment Management: Facing the Future Together

Breakout Session

Sophie Straiton
Catchment Delivery Manager
Welsh Water

Our Priority Catchments

- We want to improve raw water quality and safeguard future water supplies for our customers
- Our research and investigation programme has identified priority drinking water catchments for investment between 2020 and 2025
- They feed 23 of our water treatment works
- Our investment focus
- However, we will still work in all of our catchments – covering 11,000km²

Multiple Partners for Multiple Benefits

- ◆ We know we can deliver better results for our customers when organisations, people and communities work together
- ◆ We can share knowledge, expertise, enthusiasm and resources
- ◆ We want to work with you to co-create, co-deliver or contribute to projects, initiatives, schemes and partnerships
- ◆ By working together, we can deliver multiple benefits whilst safeguarding drinking water sources for future generations

Multiple Partners for Multiple Benefits

- ◆ We are involved in many collaborative projects but recognise there is more we can do
- ◆ Some examples of the collaborative projects include:
 - Drone surveys for nutrient management with Aberystwyth University
 - BRICS project
 - Fire and Water
 - Poultry Litter Working Group
 - Pendine Farmer Group

What's Out There?

- We want you to help us identify opportunities to work collaboratively to deliver multiple benefits whilst improving raw water quality
- Our ambition is to work proactively across all of our drinking water catchments
- Please tell us about any partnerships, projects, initiatives or schemes that you know about
- There are 4 maps around the room – spend 10 minutes at each
- Please provide information on the post-it notes

For Example ...

XXX is developing a project to help control/eradicate sheep scab

There is an active community group in XXX working together to improve the local natural environment

XXX is developing a project looking at ways to reduce nutrient loss from soils

XXX are working together to apply for grant funding to improve peatland

Thank you / Diolch
